React19 Persistent Symptoms Survey #2

Symptoms Progression

1047 Participants  09/30/2021 – 04/03/2022

Edoardo Galli, PhD
edoardo.galli@react19.org
Survey Outline

Part 1:
- Symptoms prevalence
- Symptoms evolution
- Symptoms cluster
- Quality of Life
- Pre-Existing Conditions
- Methodology

Part 2:
- Tests
- Diagnoses

- Validate findings of the previous analysis
- Improve data visualisation
- Find additional information, clusters, patterns, and/or trends if present
- Identify flaws and issues to improve the next survey round

Survey Design:
Drew Franklin

Survey 2

Clusters of Symptoms
Symptom Clusters

Each column shows % of how many people have reported the other symptoms.

Less reported symptoms are more likely to be coupled with other more generic symptoms.
Symptom Clusters

Zero anything below 0.7 to spot clear patterns

• Top 10 symptoms are very often reported with any of the other symptoms

• Symptoms that affect the same organ/system are often coupled together
Survey 2

Quality of Life
Respondents with pre-existing conditions may be more likely to be unable to work → higher reported severity

Previously healthy, working individuals report a dramatic change in their daily living.

<table>
<thead>
<tr>
<th>Category</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bed Bound</td>
<td>11%</td>
</tr>
<tr>
<td>Unable To Exercise</td>
<td>57%</td>
</tr>
<tr>
<td>Unable To Work</td>
<td>33%</td>
</tr>
</tbody>
</table>

Average Severity: 1.87

0  I can live life like I did before
1  I work or do chores and do light exercise
2  I work or do chores but can’t exercise
3  I am unable to work but can’t do chores
4  I am unable to work and bedridden most days
Quality Of Life

Patient-Led Surveys

Symptoms and Severity

Reported severity is correlated with reported number of symptoms

0 I can live life like I did before
1 I work or do chore and do light exercise
2 I work or do chores but can't exercise
3 I am unable to work but can't do chores
4 I am unable to work and bedridden most days

Only 3 respondents out of 930 reported >45 symptoms
Quality Of Life
Status Evolution and Severity

Ratio of people reporting that they are improving decreases monotonically with increasing severity.
Pre-Existing Conditions
# Medical History

## Patient-Led Surveys

<table>
<thead>
<tr>
<th>Question</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Previous Vaccine Reaction?</strong></td>
<td><strong>NO - 94%</strong></td>
</tr>
<tr>
<td>Prior to Covid vaccination, have you ever reacted to any previous vaccine you had received?</td>
<td></td>
</tr>
<tr>
<td><strong>History of Covid Infection</strong></td>
<td><strong>NO - 76%</strong></td>
</tr>
<tr>
<td>Have you ever had a positive Covid infection?</td>
<td></td>
</tr>
<tr>
<td><strong>Pre-Existing Conditions</strong></td>
<td><strong>NO - 42%</strong></td>
</tr>
<tr>
<td>Do you have any pre-existing health conditions?</td>
<td></td>
</tr>
</tbody>
</table>
Pre-existing conditions reported by more than 1% of respondents.

(More specific data collection is needed in next survey.)

Around 16% of all reported pre-existing conditions fall in the autoimmune category.
Respondents with pre-existing conditions may be more likely to be unable to work → higher reported severity.
Survey 2

Methodology
1047 respondents

- 67 excluded from whole study
  - no adverse reaction to vaccination
  - all symptoms selected

980 respondents

- 50 excluded from severity analysis
  - no severity data

930 respondents

- 142 excluded from pre-existing condition analysis
  - ambiguous data

838 respondents

- 44 excluded from pre-existing condition/severity analysis
  - no severity data

794 respondents

Free form answers manually checked

**980 people included in the analysis:**

838 people included in the pre-existing conditions analysis

930 people included in the severity analysis

794 people included in pre-existing/severity analysis.
Symptoms Grouping for **Data Analysis**

- Myocarditis and glaucoma are not symptoms so may need to be removed from the analysis for consistency.
- Groups of symptoms created based on general/common medical categories (WHO, NIH etc.):

PART 2
Abnormal Tests, Diagnoses
Goals

930 respondents, 4650 free form answers manually analysed

• Analysis of reported abnormal test results
• Analysis of misdiagnoses
• Analysis of formal diagnoses

Warning: results are not encouraging, but note they were from 1+ year ago.

Note: we do not know the total amount of people that had a particular test, so these results and percentages have limited meaning.
Abnormal Test Results

53% of respondents report that all tests have come back normal, no test done, or not available.

Most common abnormal blood tests were:
- Inflammatory markers (3.8%)
- Iron/Ferritin (3.4%)
- ANA (3.1%)
- D-Dimer (2.9%)
- VitD (1.6%)
- WBC (1.6%)

Most common diagnostic tools
- ECG (5.3%)
- MRI (4.2%)
- Heart Rate (3.8%)
- Echocardiogram (2.2%)
- Holter (1.9%)
- EMG (1.6%)
Patient-Led Surveys

**Reported Misdiagnosis**

- 45.5% NA – either blank, no diagnosis yet, not visited a Dr/specialist or similar
- 20.9% unknown or no diagnosis
- 11.8% anxiety, depression, panic attacks, stress, ageing, menopause and similar
- 2.4% explicitly state they have been dismissed

These 4 categories make up 80.5% of respondents.

---

*Doctors don’t know what it is*  
*I’m making it up!*

*My doctors doesn’t know what is going on.*

*Doctors said I was imagining my symptoms, refused to treat.*
Reported Diagnosis

- 7.1% doctors acknowledged some sort of vaccine adverse event
- 5.4% anxiety, depression, panic attacks, stress, ageing, menopause and similar
- Tachycardia/Arrhythmia and POTS/Dysautonomia make up around 8% of respondents
- 5.9% of respondents report being diagnosed with myocarditis, pericarditis, or myopericarditis

40.6% No formal diagnosis yet
100% of your donation to the CAREfund goes directly into the hands of the Covid vaccine-injured.

100% of donations go to an injured in need for medical expenses.

Donate Here:

We understand just how important each and every dollar is that comes into this fund. So we have setup this fund to be 100% given back to the injured community to help individuals pay for medical expenses.
Thank You
